

VOLITION[®]

DESKING SYSTEM

VOLITION = VARIETY

Any free-standing office furniture can blend the accessibility of traditional desking with the efficiency of a panel-based system, but it takes Volition to create your own workspace.

Whether you are building an environment from the ground up or incorporating new furniture into an existing layout, Volition is the perfect choice. Worksurfaces in widths from 24" to 72" and two depths accommodate any size space. Likewise, leg glides with over 1" of adjustability guarantee a stable installation on every flooring surface. And with almost unlimited paint, laminate, and fabric combinations, Volition harmonizes with nearly any color palette.

Your office furniture has to do more than suit your space. It also has to suit your changing needs. Volition responds with add-on worksurfaces and curvilinear peninsula shapes that transform a desk into a meeting space at the swivel of a chair.

To ensure that only your intended audience is treated to your presentation, Volition includes privacy features in multiple configurations. End and modesty panels can maximize either air circulation or coverage, and desktop screens are available in both upholstered and translucent options. You've come a long way from covering your answers with your hand, shouldn't your furniture?

Privacy Screen - A single translucent privacy screen serves to visually divide two stations at the edge of a worksurface.

Full End Panel - Steel full-end panels enhance privacy, reduce noise, and provide complete enclosure for under-desk storage.

Partial End Panel - can be used at desk intersections to improve accessibility and increase leg room.

Pedestal Cushion - A Series XXI® pedestal file with a cushioned top handles storage and impromptu seating needs.

Volition not only exceeds ANSI/BIFMA standards, it couples convenience items to its safety features. A 10-wire electrical distribution system can be housed within the desk's horizontal structural beam to supply power at the worksurface without overtaxing building circuits or running dangerous extension cords.

Data cables can be routed through the leg supports, stanchions, grommets or modesty beams to provide access where you want it without loose cables.

Since workspace clutter isn't limited to cables and cords, Volition provides additional storage solutions. Tool rails secure everything, from hanging files to pencils, to the desk framework. Similarly, stanchions put Venus® and Universal™ overhead cabinets within easy reach.

Full Modesty Panels - are used here to provide unbroken coverage for the front of an executive desk.

Grommets - are standard in the corners of the desk to allow easy access to the wireways within.

72" Venus Overhead - ADA-compliant Venus overhead is mounted above the same sized worksurface via two reinforced steel stanchions. Upper doors of all overheads are available in standard paint or fabric finishes to coordinate with any décor.

Partial Modesty Panel with D-Leg - All peninsula desks are equipped with partial modesty panels for improved aesthetics.

Corner Leg - provides support and routes power cables run within the desk to the stanchion above.

Desk Jumper - Flexible desk jumpers connect the power systems of adjoining desks, reducing the number of feeds required.

Tool Rail - mounted between stanchions or to worksurfaces put accessories close at hand.

VOLITION[®]

DESKING SYSTEM

CONVENIENCE AT YOUR FINGERTIPS

A PERFECT MARRIAGE OF FORM AND FUNCTION...

Universal Overhead - doors recess into the cabinet, allowing you to use the top as an additional shelf.

Venus Overheads - feature two-part "clamshell" doors that can be easily operated from a seated position.

Every component of Volition was thoughtfully designed to be both aesthetically pleasing and highly functional. Although stanchions primarily support overheads or countertops, as part of the Volition line they are also tailored frames for privacy screens.

The screens themselves are a combination tackboard, acoustic dampener, and divider, but they also create a finished look when bridging the gap between an overhead and desk.

Form and function isn't the only union Volition achieves. Series XXI® storage units mesh with the system in two ways. Hanging, mobile, or free-standing pedestal files and 2 drawer lateral files fit perfectly beneath the worksurface. In addition, Series XXI kiosks on either side of a desk and overhead combination create all-in-one storage with a unified profile.

Volition is also compatible with the PowerWorks® and System XXI® panel lines. It attaches to the framework of either system via specialized brackets, allowing you to retain the desking even if you remodel with fully powered panels.

If you are starting with System XXI or PowerWorks components, Volition's Universal and Venus overhead conversion kits allow you to integrate them into a new layout. When you are building an adaptable office environment, Volition is the first step.

Stanchion Mounted Countertops - create transaction spaces while concealing 11-1/2" of storage for the user.

Stanchion Mounted Overheads - Overheads are mechanically fastened to the desk frame by way of steel stanchions which can also contain wires and receptacles.

Power Pole - enters the worksurface grommets to connect ceiling power feeds with the furniture's 10-wire electrical system.

Behind Stanchion Mounted Screens - provide privacy independent of stanchions and overheads.

Between Stanchion Mounted Screens - create a flush appearance from outside the space.

Exposed Frame Screens - Screens can be ordered fully upholstered or with a durable exposed metal frame painted the trim color.
